

SUCCESSFUL OPERATION

EVERYTHING YOU CAN IMAGINE IS REAL

Satisfied Customers

Saving of Resources

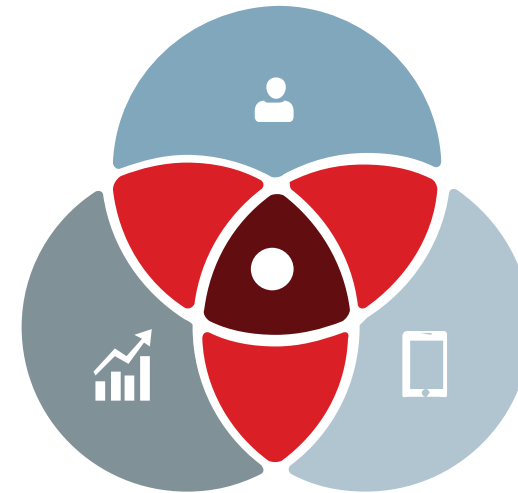

Increase Performance
of Fixed assets

The innovative **ANNEXbit** technology makes reality the applications of the **IoT** (Internet of Things) and offers you, without any exceptions and conditions, an interconnection for

- **Machines**
- **Objects**
- **Staff**
- **Points of space**

«Having these sensors – having these process and system feeding live data to inform our staff – transforms our whole operating practice”

Healthcare organization

ANNEXbit technology has been developed and patented with IOT & M2M international patents and provides you with a fast flow of critical business information with absolute

economy · security · convenience

Making use of innovative chips and innovative cloud services offers connection between any of the more complex machines to the most simple objects through the Internet.

In this chain you can connect your staff and create the flow of information you want

«In the past once an issue was found in our operation , we took around an hour to settle the issue on average – currently ,the required time is just 5 minutes”

Hotel Operating company

Interconnection and Control of **MACHINERY**

Automatic Information Flow for Hotels,
Hospitals and Shopping Centers

Wireless networking of all machines and rooms with the central base. Preventing and systematically managing each malfunction by mobilizing and monitoring all those who involved in its recovery process.

Technical manuals, photos, drawings and any kind of useful information now are stored where you need them, in front of each machine, inside each room, on each object they are concerned with. No time is spent on unnecessary staff movements or unnecessary searches because everything you need is automatically focused on each machine, object, and point of space, available on the spot .

Display and record the presence of staff by location and create historical activity.

Books of inspections and maintenance of machinery and premises are kept automatically. Get immediate insight into what replacement, consumable or material goes where and why, and which faults occur more often than whom. Use them with ease in any kind of certification and prevent damages.

Dynamic and flexible work scheduling with auto create “List to do” and Notification Alert . Easily and quickly scheduling of any type of job, either repeatedly or individually, with personalized job listings for all staff and with the ability to change them at any time.

Reports for preventing and detecting problems in all controlled machinery or premises and scoring the response of staff.

Interconnection and Control of **SPACES and OBJECTS**

Automatic Information Flow for Hotels,
Hospitals and Shopping Centers

Immediate reporting of damages or requests from users / customers and direct informing to the appropriate technician concerned about their resolution and settlement. Automatic step-by-step recording of all process until resolution.

B2C mode of all the chip with predefined information accessible to everyone gives “life” to your business , informing and updating as and when you wish.

GM Dashboard Give to your business or organization manager the ability to have complete control of the organization in real time with useful information such as new requests, ongoing requests, resolved requests, presence of staff, ongoing work, real-time monitoring time of completion of “List to do” etc

Adopters report a wide range of benefits

Immediate networking without cables

Passive chip technology without radiation

Installation without any construction work

Compatible with all computer operating systems

Compatible with all mobile operating systems without App installing

Software upgrades each year at no extra charge

Continuous operation without consumables and service

Waterproof chip IP67 with shock resistance of 700 kPa and temperature 300C

10 years warranty

SUCCESSFUL OPERATION

GET :

- **Satisfied customers.**

Everything works with enviable consistency and accuracy with no trouble or mistakes. The recipients of your organization's services or your business customers see that their requests are now being resolved quickly. You no longer let small or bigger daily tasks settle slowly, creating a negative image. Now your response is immediate and you create the positive image that is worthwhile for you and your staff.

- **Saving resources.**

Reduce operating costs by increasing the productivity of your staff. Reduce dramatically the time for the flow of information to staff as well as the it's response time. In addition, you can now know exactly what's going on with your company's equipment, having a full picture of all the staff's actions.

SUCCESSFUL OPERATION

GET :

- **Effective and productive asset management.**

Ensure that all of your machines work seamlessly by significantly reducing unexpected glitches or damages that harm your business image. In addition, buildings and all kinds of indoor or outdoor spaces can be interconnected to be controlled and maintained in a timely manner.

- **Reporting in real time.**

Take an in-depth look at what's going on in the organization or business you run, and find out what happens when and by whom. Quickly and promptly inform you of the issues that arise at the time they occur, and especially see the course until they are finally resolved.
